SpineCare Program Results

Pre-treatment vs. Post-treatment Condition Scores

Higher scores indicate a better patient health state.
For example, functional items with a high score indicates better functioning,
and emotional and pain items with a high score indicates a better condition.

* Scores are from patient and general population surveys using the SF-12 standardized health survey form.
* General Population represents survey mean scores of U.S. general public respondents.
* Total Survey respondents: 246 Standard Deviation: 10
