If you are pregnant (or think you may be pregnant), or if you are nursing a baby, please inform your doctor before your appointment is scheduled.

There is no special preparation for this test. You may eat breakfast and take your medications.

**WHAT IS A BREAST IMAGE?**

You will be given an injection in the vein of your arm. The injection will take about 5 minutes. After the injection, you will lie on your stomach on a special table. Images will be taken of your breasts with a nuclear medicine camera. Additional images will be taken of your chest while you are lying on your back with your arms up. The Nuclear Medicine Technologist will place small skin markers on your chest during the imaging.

The images will take about 1 hour. It is very important that you lie still, or the images will become blurred.

**AFTER THE TEST**

The images will be reviewed by a doctor who specializes in Nuclear Medicine. The doctor will carefully study the images and prepare a written report within 24 hours.

Your doctor will inform you of the results.

REMEMBER...our staff is here to help you. If you have questions about any part of this test, please ask.

**Please arrive 10 minutes prior to your appointment to complete the registration process.**

To find Nuclear Medicine, enter the campus on 87th street. Follow the signs to Parking Area 3. Take the parking structure elevator to level D. The bridge leads to the 2nd level of the Specialty Clinics Building. Follow the signs to Nuclear Medicine.
